## Operating Instructions

Dear Customer,

Many thanks for the confidence you have shown in us with the purchase of your new PROMAC-machine. This manual has been prepared for the owner and operators of a **JMDT-804516 milling drilling center** to promote safety during installation, operation and maintenance procedures. Please read and understand the information contained in these operating instructions and the accompanying documents. To obtain maximum life and efficiency from your machine, and to use the machine safely, read this manual thoroughly and follow instructions carefully.

### ...Table of Contents

### 1. Declaration of conformity

On our own responsibility we hereby declare that this product complies with the regulations listed on page 2.

Designed in consideration with the standards.

### 2. PROMAC Warranty

TOOL FRANCE SARL guarantees that the supplied product(s) is/are free from material defects and manufacturing faults.

This warranty does not cover any defects which are caused, either directly or indirectly, by incorrect use, carelessness, damage due to accidents, repairs or inadequate maintenance or cleaning as well as normal wear and tear.

Further details on warranty (e.g. warranty period) can be found in the General Terms and Conditions (GTC) that are an integral part of the contract.

These GTC may be viewed on the website of your dealer or sent to you upon request.

TOOL FRANCE SARL reserves the right to make changes to the product and accessories at any time.

### 3. Safety

#### 3.1 Authorized use

This milling drilling center is designed for milling and drilling machinable metal and plastic materials only. Machining of other materials is not permitted and may be carried out in specific cases only after consulting with the manufacturer.

#### Never cut magnesium- high danger to fire!

The proper use also includes compliance with the operating and maintenance instructions given in this manual.

The machine must be operated only by persons familiar with its operation and

maintenance and who are familiar with its hazards.

The required minimum age must be observed.

The machine must only be used in a technically perfect condition.

When working on the machine, all safety mechanisms and covers must be mounted.

In addition to the safety requirements contained in these operating instructions and your country's applicable regulations, you should observe the generally recognized technical rules concerning the operation of metalworking machines.

Any other use exceeds authorization. In the event of unauthorized use of the machine, the manufacturer renounces all liability and the responsibility is transferred exclusively to the operator.

#### 3.2 General safety notes

Metalworking machines can be dangerous if not used properly. Therefore the appropriate general technical rules as well as the following notes must be observed.

Read and understand the entire instruction manual before attempting assembly or operation.

Keep this operating instruction close by the machine, protected from dirt and humidity, and pass it over to the new owner if you part with the tool.

No changes to the machine may be made.

Daily inspect the function and existence of the safety appliances before you start the machine.

Do not attempt operation in this case, protect the machine by unplugging the power cord.

Remove all loose clothing and confine long hair.

Before operating the machine, remove tie, rings, watches, other jewellery, and roll up sleeves above the elbows.

Wear safety shoes; never wear leisure shoes or sandals.

Always wear the approved working outfit.

Do **not** wear gloves.

Wear goggles when working

Install the machine so that there is sufficient space for safe operation and work piece handling.

Keep work area well lighted.

The machine is designed to operate in closed rooms and must be bolted to the cabinet stand or a solid work bench.

Make sure that the power cord does not impede work and cause people to trip.

Keep the floor around the machine clean and free of scrap material, oil and grease.

Stay alert!

Give your work undivided attention. Use common sense. Do not operate the machine when you are tired.

Do not operate the machine under the influence of drugs, alcohol or any medication. Be aware that medication can change your behaviour.

Never reach into the machine while it is operating or running down.

Never leave a running machine unattended. Before you leave the workplace switch off the machine.

Keep children and visitors a safe distance from the work area.

Do not operate the electric tool near inflammable liquids or gases. Observe the fire fighting and fire alert options, for example the fire extinguisher operation and place.

Do not use the machine in a dump environment and do not expose it to rain.

Work only with well sharpened tools.

Always close the chuck guard and pulley cover before you start the machine.

Remove the chuck key and wrenches before machine operation.

Specifications regarding the maximum or minimum size of the work piece must be observed.

Do not remove chips and work piece parts until the machine is at a standstill.

Do not stand on the machine.

Connection and repair work on the electrical installation may be carried out by a qualified electrician only.

Have a damaged or worn power cord replaced immediately.

Never place your fingers in a position where they could contact any rotating tool, chuck or cutting chips.

Secure workpiece against rotation. Use fixtures, clamps or a vice to hold the workpiece.

Never hold the workpiece with your hands alone.

When using a vice, always fasten it to the table.

Never do any works "freehand" (hand-holding the work piece rather than supporting it).

Never move the head while the machine is running.

If a work piece overhangs the table such that it will fall or tip if not held, clamp it to the table or provide auxiliary support.

Check the safe clamping of the work piece before starting the machine.

Remove cutting chips with the aid of an appropriate chip hook when the machine is at a standstill only.

Never stop the rotating chuck or tool with your hands.

Measurements and adjustments may be carried out when the machine is at a standstill only.

Setup work may only be carried out after the machine is protected against accidental starting by pressing the emergency stop button.

Maintenance and repair work may only be carried out after the machine is protected against accidental starting by pulling the mains plug.

Do not use wire wheels or grinding wheels on this machine.

To avoid injury from parts thrown by the spring, follow instructions exactly as given when adjusting the spring tension of the quill (see chapter 7.5)

### 3.3 Remaining hazards

When using the machine according to regulations some remaining hazards may still exist.

The rotating chuck, tool and cutting chips can cause injury.

Thrown and hot work pieces and cutting chips can lead to injury.

Chips, dust and noise can be health hazards. Be sure to wear personal protection gear such as safety goggles, dust mask and ear protection.

The use of incorrect mains supply or a damaged power cord can lead to injuries caused by electricity.

## 4. Machine specifications

### 4.1 Technical data

#### JMDT-804516-DRO:

Drilling capacity (Iron/Steel)	45/45*mm
Milling capacity of face mill	80mm
Milling capacity of end mill	32mm
Tapping capacity (Iron/Steel)	16/16*mm
(*not for intense operations)	

Spindle to column	260mm
Distance table to spindle	max 460mm
Spindle taper	MT-4
Draw bar	M16
Spindle travel	120mm
Spindle speeds...	75-435/435-2500rpm
Max travel X-axis	560mm
Max travel Y-axis	190mm
Table size	240x800mm
T-slots...3	14mm

Overall (LxWxH)	1050x980x2100mm
Net weight	480 kg

Mains	3~400V, PE, 50Hz
Output power	1,5 kW S1
Reference current	3.7A
Extension cord (H05VV-F):	4Gx1,5 <sup>2</sup>
Installation protection	6-10A

### 4.2 Noise emission

Acoustic pressure level (EN 11202):  
Idling at maximum speed 85 dB (A)

The specified values are emission levels and are not necessarily to be seen as safe operating levels.

As workplace conditions vary, this information is intended to allow the user to make a better estimation of the hazards and risks involved only.

### 4.3 Content of delivery

1-13mm drill chuck with arbour MT4  
Draw bar M16  
Head rising crank and handle  
3 Table handwheels  
Operating tools  
Operating manual  
Spare parts list.

## 5. Transport and start up

## 5.1 Transport and installation

The machine will be delivered in a closed crate.

For transport use a forklift or hand trolley. Make sure the machine does not tip or fall off during transport.

The machine is designed to operate in closed rooms and must be bolted to the cabinet stand or a solid work bench.

For packing reasons the machine is not completely assembled.

## 5.2 Assembly

If you notice transport damage while unpacking, notify your supplier immediately. Do not operate the machine!

Dispose of the packing in an environmentally friendly manner.

Clean all rust protected surfaces with petroleum, diesel oil or a mild solvent.

Screw rubber handles onto quill down feed handle rods (A, Fig 1). Screw handle rods into hub and tighten.

Slide handwheels (B) onto table handwheel shafts and tighten set screws.

Install handle (C)

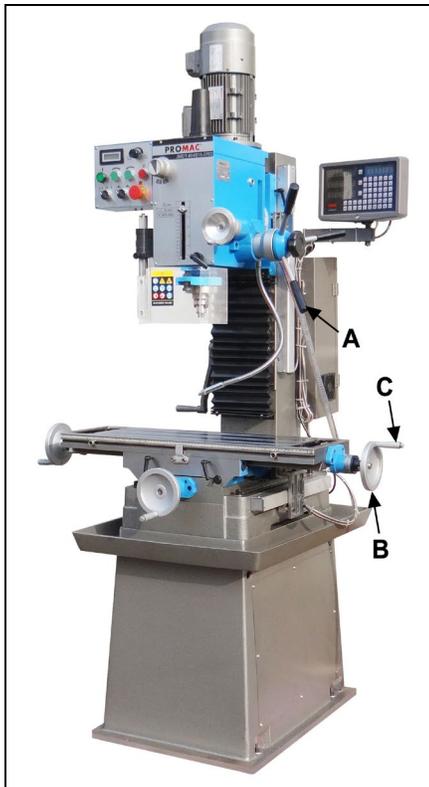

Fig 1

**Mounting machine to stand or solid workbench.**

Unbolt the machine from the shipping crate bottom.

### Caution:

**The machine is heavy.**

**JMDT-804516-DRO= 480 kg!**

**Assure the sufficient load capacity and proper condition of your lifting devices.**

**Never step underneath suspended loads.**

Carefully place the machine onto the cabinet stand or a solid work bench.

Use a machinist's precision level to make sure that the machine table is level.

Loosen mounting bolts, shim and tighten mounting bolts if needed.

The machine must be level to be accurate.

## 5.3 Mains connection

Mains connection and any extension cords used must comply with applicable regulations.

The mains voltage must comply with the information on the machine licence plate.

The mains connection must have a 6-10A Circuit breaker.

Only use power cords marked H05VV-F

Connections and repairs to the electrical equipment may only be carried out by qualified electricians.

Connection takes place on the appropriate terminal in the electrical cabinet on the left side of the machine.

## 5.4 Initial lubrication

The machine must be serviced at all lubrication points before it is placed into service!

Failure to comply may cause serious damage.  
(see chapter 8 for lubrication)

## 5.5 Starting operation

**Before starting the machine check the proper chucking (see chapter 6.2)**

You can start the machine with the green ON-button (K, Fig 4).

The red button on the control box stops the machine (M).

The emergency stop button (L) stops all machine functions.

**Attention:**

The machine still has electric power. Turn emergency stop button clockwise to reset.

The Forward/Reverse buttons (P/Q) may only be operated when motor power has been stopped before.

### WARNING:

**Do not change the spindle running direction while machine is running.**

Improper operation may damage the Fw/Rev switch and gears.

## 6. Machine operation

### Warning:

**Setup work may only be carried out after the machine is protected against accidental starting. With pressed emergency stop button.**

Never place your fingers in a position where they could contact any rotating tool, chuck or cutting chips.

Remove cutting chips with the aid of an appropriate chip hook when the machine is at a standstill only.

Never stop the rotating chuck or tool with your hands.

Always close the chuck guard and pulley cover before you start the machine.

Secure workpiece to the table with clamps or a vice to prevent rotating with the drill bit.

When using a vice, always fasten it to the table.

Check the safe clamping of the workpiece, chuck and tools before starting the machine.

Never do any works "freehand" (hand-holding the work piece rather than supporting it on the table).

Support long workpieces with helping roller stands.

Always adjust the depth stop to prevent drilling into the table or into the workholding device.

Feed a drill bit into the material with only enough force to allow the drill bit to work. Feeding too slowly may cause burning of the workpiece or tool. Feeding too quickly may cause the motor to stop and/or the drill bit to break.

Do not use wire wheels or grinding wheels on this machine.

Never cut magnesium-  
high danger to fire!

Measurements and adjustments may be  
carried out when the machine is at a  
standstill only.

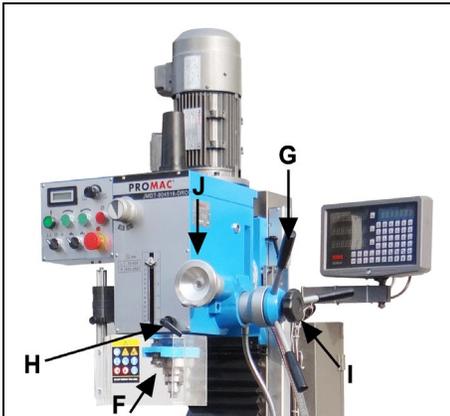

**In case of danger push the  
emergency stop button.**

## 6.1 Controls

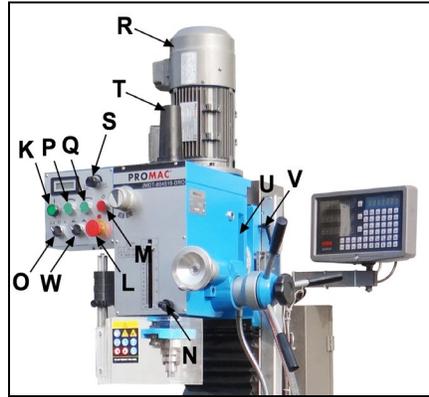

**Fig 2**

- A....X-axis handwheel
- B....Y-axis handwheel
- C....X-axis adjustable stop
- D....X-axis slide lock
- E....Y-axis slide lock

**Fig 3**

- F....Drill depth stop adjustment knob
- G....Downfeed handles
- H....Fine feed hand wheel
- I....Fine feed engagement knob
- J....Fine feed dial

**Fig 4**

- K....Power ON button / Power Light
- L....Emergency stop button
- M....Power OFF button
- N....Quill lock handle
- O....Drilling / Tapping Switch
- P....Forward button
- Q....Reverse button
- R....Motor
- S.... Speed control knob
- T....Draw bar cover
- U....Head tilting lock nuts
- V....Z-axis slide lock

## 6.2 Spindle speeds selection

The correct spindle speed depends on  
the type of machining, the cutting  
diameter, the material to be machined  
and the cutting tool.

These are recommended max. speeds  
for a 10mm high speed steel (HSS) tool  
(e.g. drill bit).

Aluminium, brass	1500 RPM
Cast iron	1000 RPM
Mild steel	800 RPM
High carbon steel	600 RPM
Stainless steel	300 RPM

If a carbide (HM) tool is used about 5  
times higher speeds can be chosen.

Generally speaking, the larger in  
relation the cutting diameter, the smaller  
the possible RPM.

### For example:

Milling mild steel with an end mill of  
20mm allows a speed of

400 RPM max.	with HSS tool
2000 RPM max.	with carbide tool

## 7. Setup and adjustments

### Warning:

**Setup and adjustment work may only  
be carried out after the machine is  
protected against accidental starting.  
Press emergency stop button!**

### 7.1 Changing spindle speeds

Speeds may only be changed at  
complete spindle standstill.

### WARNING:

**Changing speeds during spindle or  
motor rotation will damage the gears.**

Refer to the speed chart whenever  
changing speeds.

### 7.2 Arbor replacement

Remove the draw bar cover (T, Fig 4).

Select the lowest spindle speed to keep  
the spindle from turning.

Loosen the drawbar with a wrench.

Loosen the drawbar 2 to max 3 full  
turns.

Tap the drawbar head with a rubber  
mallet to dislodge the tool taper.

### 7.3 Adjusting the Depth Stop

To drill multiple holes at the same  
preset depth, use the depth stop:

Turn the knob of depth stop(F, Fig 3) to  
move to the desired position.

### 7.4 Engaging the Fine Feed Wheel

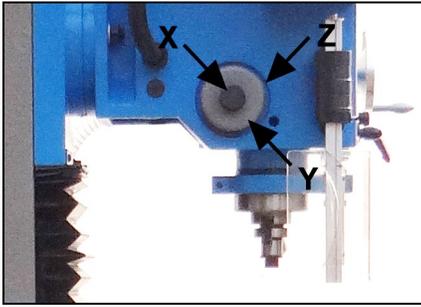

To activate the fine feed hand wheel  
tighten the engagement knob (I, Fig 3).

### 7.5 Return Spring Adjustment

The return spring is adjusted at the  
factory and should not need further  
adjustment. If adjustment is necessary:

Loosen knob (X, Fig. 5) approximately  
6mm.

**Do not remove the spring cover (Y).**

**Fig 5**

Firmly hold the spring cover (Y).

Pull out the cover and rotate until the pin (Z) on the return spring plate engages the next notch in the coil spring cover. Turn the cover clockwise to decrease tension and counter-clockwise to increase tension.

Tighten knob (X).

### 7.6 Before Operation

Prepare oil gun with coolant or cutting oil.

In order to keep the accurate precision, the table must be free from dust and oil deposits.

Check to see that the tools are correctly set and the workpiece is set firmly.

Be sure the speed is not set to fast.

Be sure everything is ready before use

### 7.7 After Operation

Turn off the electric switch.

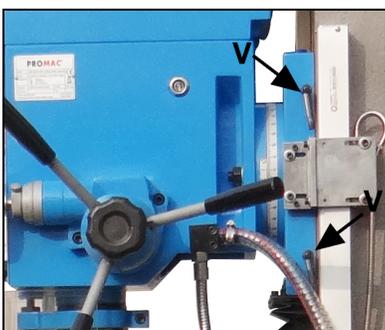

Turn down the tools.

Clean the machine and coat it with lubricant.

Cover the machine with cloth to keep out the dust.

### 7.8 Adjustment of Head

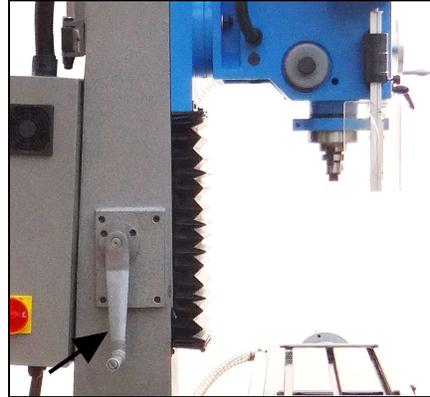

To raise and lower the head, loosen the two nuts (V, Fig 6) located on the right side of the Z-slide.

**Fig 6**

Use the crank (Fig 7) to raise and lower the head.

When the desired height is reached tighten the 2 nuts to avoid vibration.

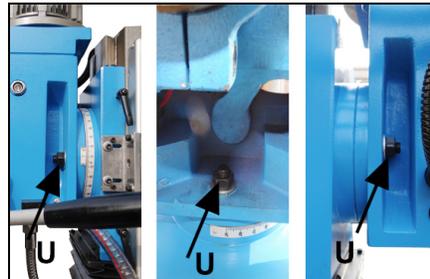

**Fig 7**

The head may be rotated 360° around the column.

Loosen the 2 nuts (V, Fig 6).

Adjust the head, then well tighten the nuts to avoid movement under machining loads.

**Fig 8**

The head may be tilted left/right.

Loosen 3 nuts (U, Fig 8).

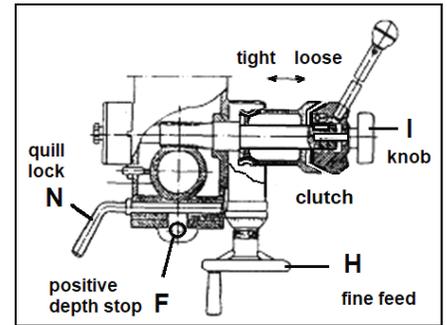

Tilt the head to the degrees you wish on the scale, then well tighten the 3 nuts to avoid vibration.

### 7.9 Preparing for Drilling.

Loosen the quill lock (N, Fig 4, Fig 9).

Loosen the knob (I) to make loose the taper clutch of worm gear, to disengage the fine feed (H).

Set the positive depth stop (F) to the desired drilling depth.

**Fig 9**

### 7.10 Preparing for Milling

Adjust the positive depth stop (F, Fig 9) to highest point position.

Turn tight of the knob (I) to engage the taper clutch, to engage the fine feed (H).

Turn the fine feed hand wheel (H) to adjust the desired machining height.

Tighten the quill lock (N) to avoid vibration.

## 8. Maintenance and inspection

### General notes:

**Maintenance, cleaning and repair work may only be carried out after the machine is protected against accidental starting. Push the emergency stop button and disconnect from the power source!**

Clean the machine regularly.

Defective safety devices must be replaced immediately.

Repair and maintenance work on the electrical system may only be carried out by a qualified electrician.

### 8.1 Weekly Lubrication:

#### Weekly apply oil:

**DIN 51502 CG ISO VG68**

(e.g. BP Maccurat 68, Castrol Magna BD 68, Mobil Vectra 2)

- **X-axis lead screw**  
Apply oil on entire length.

- **Y-axis lead screw**  
Move the table forward and remove the way cover for access.  
Apply oil on entire length.

- **Z-axis lead screw**  
Move the head up and remove the way cover for access.  
Apply oil on entire length.

## 8.2 Daily Lubrication:

### Daily apply oil:

**CGLP DIN 51502 ISO VG68**

(e.g. BP Maccurat 68, Mobil Vectra 2)

#### - X/Y-axis hand wheels

Lubricate ball oilers.

#### - Z-axis crank handle

Lubricate ball oiler.

#### - X/Y-axis ways

Lubricate ways on entire length.

#### - Z-axis ways

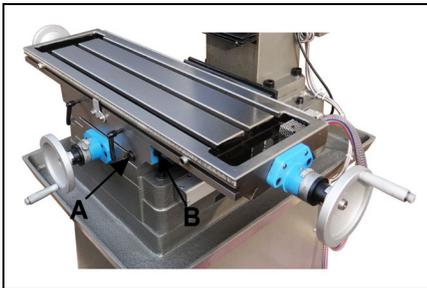

Fill reservoir oiler.

#### - Spindle quill

Apply oil on entire length.

## 8.3 Slide adjustments

X-axis and Y-axis slides are fitted with tapered gibs.

**Fig 10**

If adjustment is needed:  
Tighten gib screw (A, B, Fig 10)

clockwise appr. a quarter turn.

Try and repeat until slide moves freely without play.

## 8.4 Lead screw nut adjustment

The table is fitted with an adjustable (slotted) leadscrew nut.

Tighten adjusting screw on leadscrew nut to reduce the backlash.

## 9. Trouble shooting

### Motor doesn't start

\*No electricity-  
check mains and fuse.

\*Defective switch, motor or cord-  
consult an electrician.

### Machine vibration

\*Incorrect belt tension-  
adjust belt tension.

\*Stand on uneven floor-  
adjust stand for even support.

\*Tool deflection-  
reduce tool length.

\*Slide backlash-  
adjust slide gibs.

\*Slides running dry-  
lubricate with oil.

\*Dry spindle quill-  
lubricate spindle quill.

\*Dull tool tip-  
resharpen or change tool.

\*Chip load too high-  
reduce depth of cut or feed-

\*Table leadscrew nut has play-  
tighten adjusting screw.

### Tool tip burns

\*Cutting speed too high-  
reduce spindle speed.

\*Dull tool tip-  
resharpen tool tip.

### Drill leads off

\*cutting lips or angle not equal-  
resharpen drill bit correctly.

\*drilled hole off centre-  
drill a pilot hole first.

\*bent drill bit-  
use a proper drill bit.

\*drill bit not properly installed-  
install drill bit correctly.

## 10. Environmental protection

Protect the environment.

Your appliance contains valuable materials which can be recovered or recycled. Please leave it at a specialized institution.

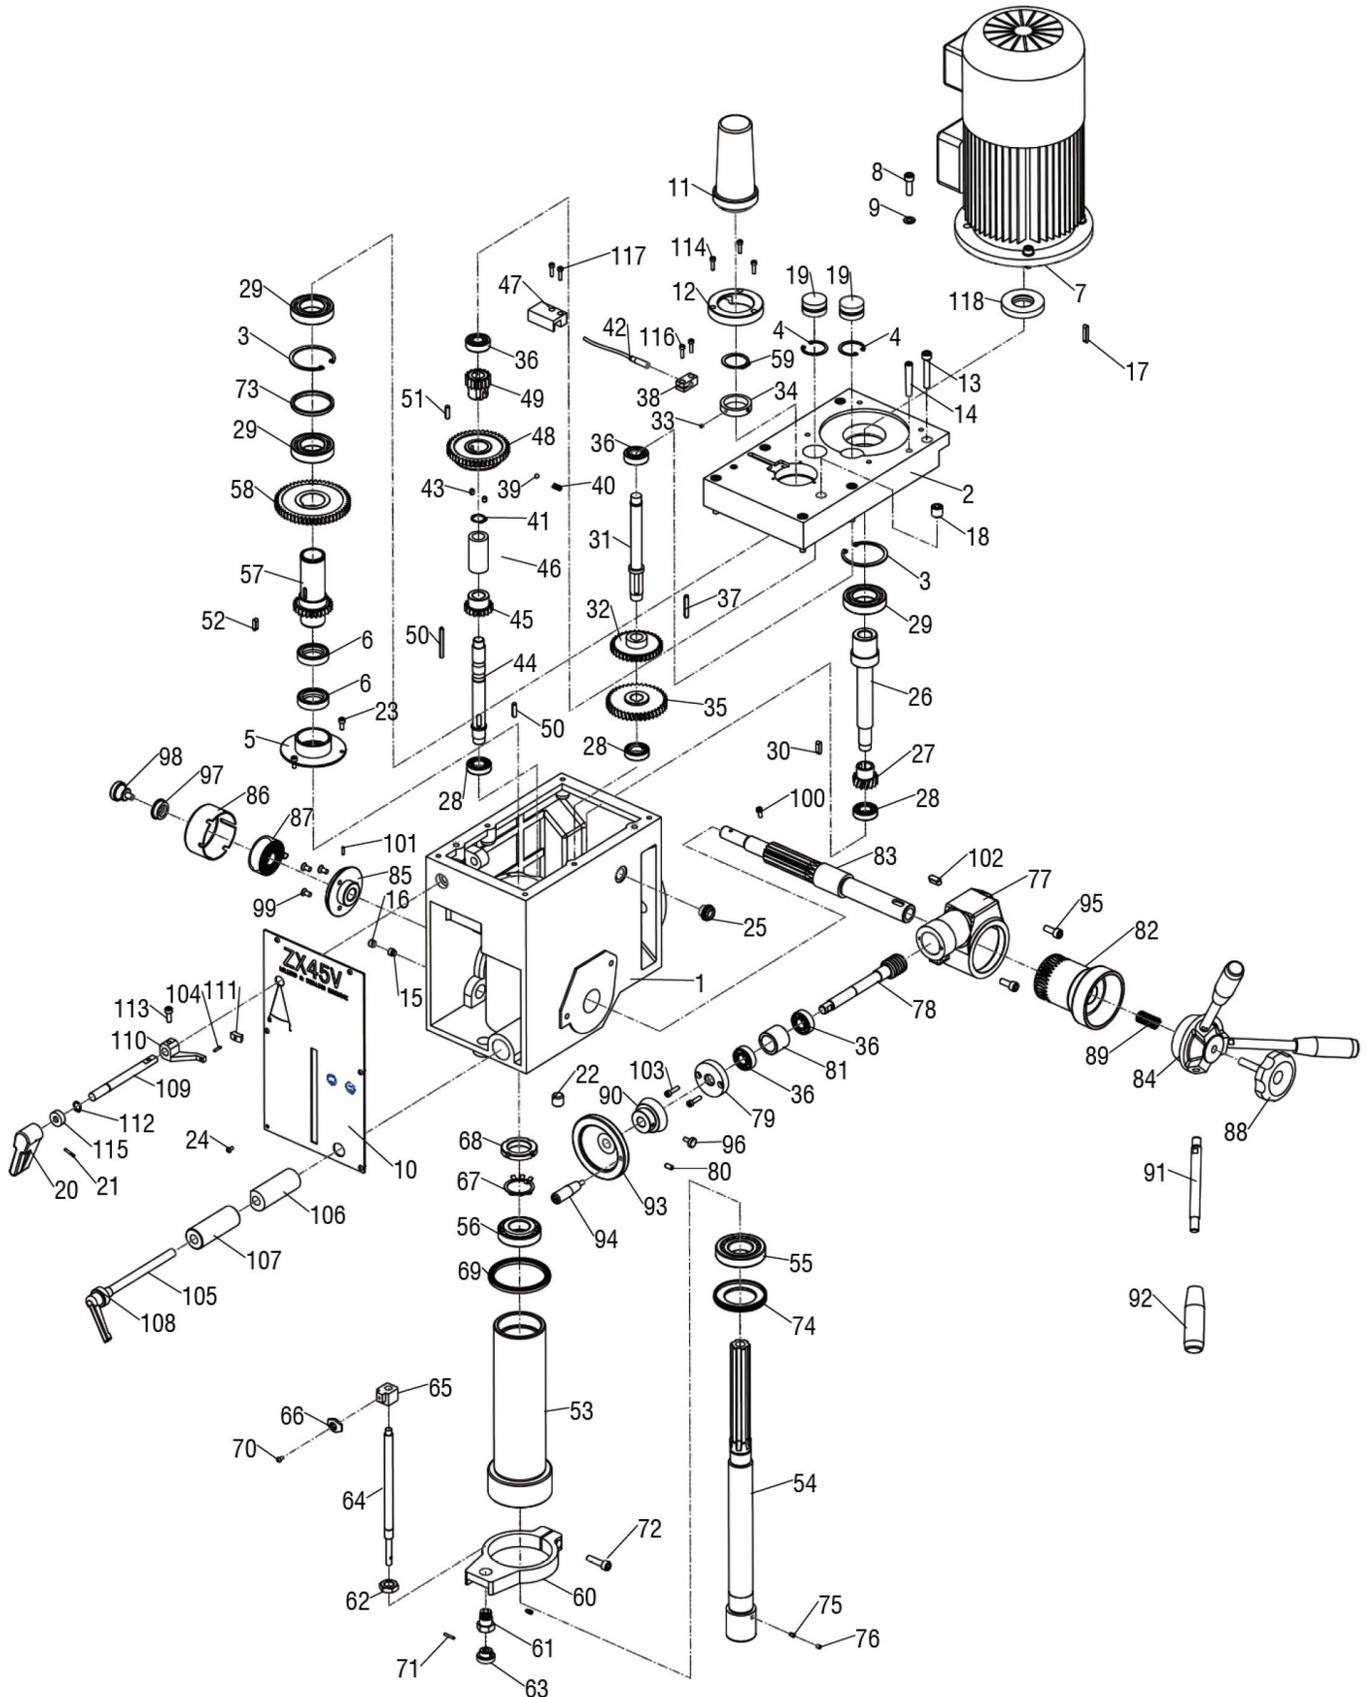

This symbol indicates separate collection for electrical and electronic equipment required under the WEEE Directive (Directive 2012/19/EC) and is effective only within the European Union.

## 11. Available accessories

Refer to the PROMAC-Pricelist for various accessories.
